ATSP / FY2 / on-call (Bleep-xxxx)

Patient had a fall at 10:30 PM

Unwitnessed

LOC (-)

Denies dizziness / palpitations / N&V / chest pain

Denies head injury

- DNACPR in place

NEWS = 0

R/R = 18/min

SpO₂ = 98% @ R.A

HR = 82/min

BP = 112/82 mmHg

Temp = 36.2°

Blood glucose = 6.2

PMHx

- HTN

- AF

- T₂DM

- On Apixaban 2.5mg BD

On examination

- Alert, oriented

- Moving all 4 limbs

- No focal neurology

- No C-spine tenderness

- No scalp tenderness

- Able to get to bed

A - Patent

B - 18/min, B/L A/R (+), clear, no added sounds

C - HR = 82/min, BP = 112/82 mmHg, CRT < 2 secs, peripheries warm

D - G.C.S = 15/15, B/L pupil reacting to light equally

E - No external injuries/bleeding, Temp = 36.2, BG = 6.2

ECH - NSR

Blood - (N)

Plan

- Hold Apixaban for now

- CT Head to r/o intracranial injury

- Restart apixaban if CT Head NAD

- Analgesics

- Ward team to review

- Neuro-obs as per protocol.
